

Final Critique

Cameron Willment

Background Research

Original idea was for a peer to peer renting app

Saw that many apps already exist

Learned about the problems they faced

Taxes

Enough users

liability

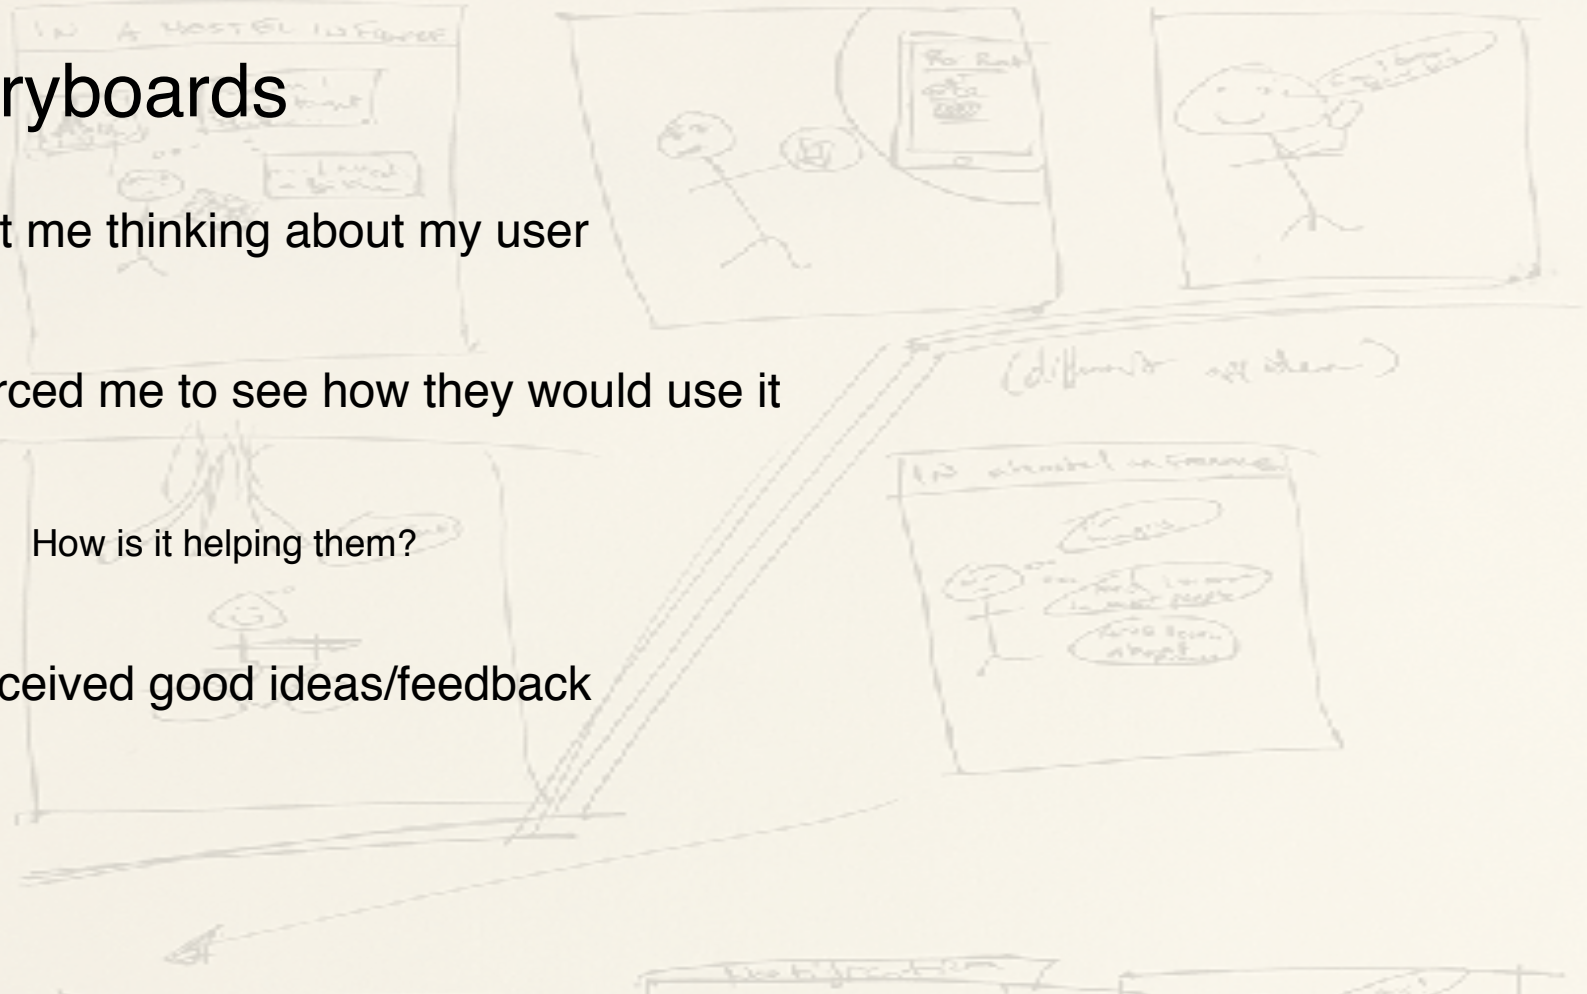

Storyboards

Got me thinking about my user

Forced me to see how they would use it

How is it helping them?

Received good ideas/feedback

User Flow

Made me think about how about how the user will navigate the app

What order should things be in?

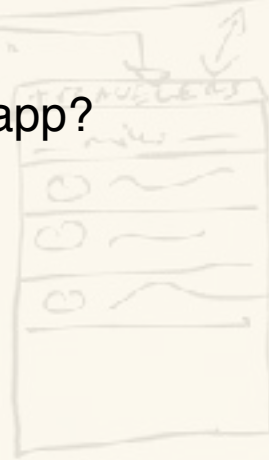

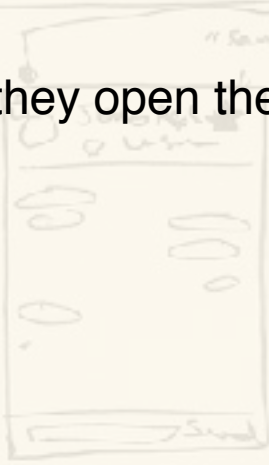

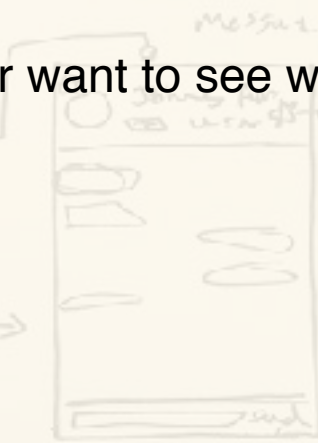

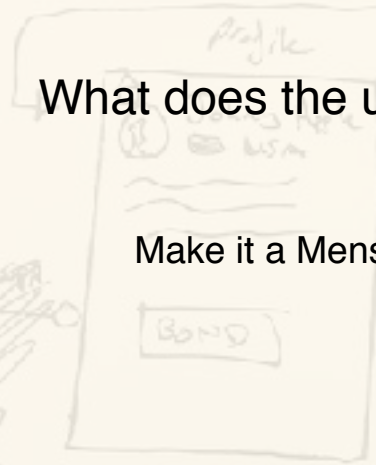

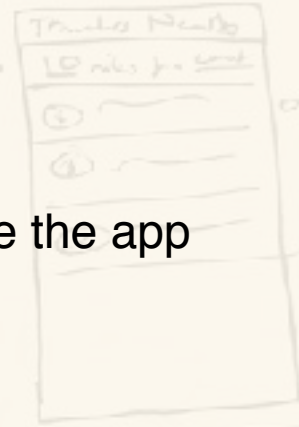

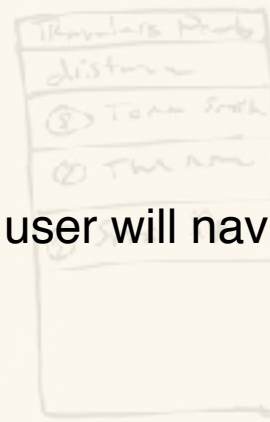

What does the user want to see when they open the app?

Make it a Mensch!

START

USER FLOW
